Certifications

Comptia Security+ | Comptia

June 2025 – June 2028

Education

University of Pittsburgh

May 2024

BS in Computer Information Systems and Technology

- Focus in Software Application Development
- Vice President of the African Student Association

Experience

Software Engineer

Herndon, VA

Obscurity Labs

Mar 2026 – July 2026

- Designed and developed microservices using Python and FastAPI, leveraging Temporal for long running asynchronous background tasks.
- Implemented and tested OPA policies via REGO to securely include network based ABAC policies.
- Implemented Zero Trust microservices security, utilizing an enriched JWT authentication.
- Architected a Kubernetes GitOps framework by implementing an App of Apps pattern with custom helm charts, standardizing microservice deployments.

Security Engineer

Chantilly, VA

Obscurity Labs

May 2025 – Mar 2026

- Assisted customer applications in integrating OAuth2.0 and OIDC for secure authentication and authorization.
- configured Oracle Webgate reverse proxies to protect web applications and enforce access policies.
- Collaborate with development teams to improve application security by reducing unauthorized access and ensure compliance with Modern Zero Trust principles.
- Demonstrated authorization flow to interested parties through curl commands and browser network traces.
- Troubleshoot non-functional user flows and identify root causes. Implement necessary remediations and recommend updates to resolve the issue.

Software Engineer

Herndon, VA

Obscurity Labs

Nov 2024 – May 2025

- Successfully led a high-risk production data migration for a critical system table. Prevented data loss and downtime and no customer impact in anticipation of NVD-CVSS v4.
- Intergrated user operation scripts to increase turn around time by over 50%
- Implemented a regression and End-to-End tests to ensure code changes did not modify legacy deliverable format.
- Maintaned and Operated a legacy system critical to software supply chain operations.
- Full-stack engineer developing in primarily in Python and React, with other languages as necessary.
- Carried out assigned Jira tickets to review business logic in a dynamic and adaptable software development process.
- Participating actively in the software development, testing, and peer review process utilizing Scaled Agile Frameworks.

Software Engineering Intern

American Refining Group

Pittsburgh, PA

Jan 2023 – May 2023

- Developed a Microsoft Power Apps based company application for inter-departmental approvals, streamlining communication by automating email notifications and reducing turnaround time; migrated from SharePoint.
- Adapted software for oil dispensing machines to align with new government regulations and ensure compliance and operation.
- Created an intranet tool for swift accident reporting, enhancing safety staff efficiency, and reducing IT intervention.
- Collaborated with Purchasing Department to create a custom blind-bidding app integrated with SuiteCRM. This building a strong and working client relationship.
- Deployed a C#.NET application for inventory management to warehouse facility. Monitored and reported stock levels to SQL DB.
- Managed Active Directory Group Policy and permissions for RBAC on custom designed software and hardware tools.
- Handled incoming IT service tickets for branch faculties including M365 and other technology services.

Freelance Full Stack Web Developer

Magitech PC

Chicago, IL

May 2020 – Aug 2020

- Collaborated closely with the business owner to gather feedback and implemented improvements to meet evolving business needs.
- Created a user-friendly interface with intuitive navigation, ensuring a seamless user experience for clients.
- Utilized iterative design process to implement customer needs and improve user

Projects

Computer Desktop Screen Recording Application

Apr 2023

- Engineered a comprehensive suite of functionality, including capturing specific screen regions, screen recording, and buffered recording for screen history. This enhances the user's ability to document and review desktop activity.
- Implemented a seamless recording experience encompassing desktop audio, user microphone audio, and desktop video. Consolidated these settings into an intuitive UI delivering user-friendly .mp4 files for efficient review

Infrared Universal Remote Mobile Application

Apr 2022

- Recorded IR frequencies using an Arduino, enabling users to replicate and control IR device functions.
- Employed Android's Consumer IR Manager package to maximize Infrared communication capabilities. This enabled the application to interact effectively with a wide range of IR device.

HomeLab Services

present

- Media Server, Burned dvds to host locally and stream from any device, anywhere.
- Private Cloud, Service akin to Google Drive hosting an Office Suite of tools with additional features.
- Authentication Provider, Host my own OpenID Connect provider to protect private applications. Integrated with 3rd party Identity Providers.
- DNS Sinkhole, Networkwide add blocking protecting my devices from malicious attacks.

Additional Information

Skills: IT Support ◦ Remote Technical Support ◦ M365 Suite ◦ Linux (Ubuntu, Arch) ◦ Windows ◦ Networking ◦ Debugging ◦ Communication ◦ Creativity ◦ Patience

Technologies: Kubernetes ◦ Django ◦ Celery ◦ RabbitMQ ◦ Tauri ◦ FFmpeg ◦ QEMU ◦ AWS ◦ GIMP ◦ Blender ◦ Whisper ◦ Docker ◦ Jenkins ◦ Selenium

Programming Languages: Python ◦ Rust ◦ Javascript ◦ Visual Basic ◦ NI: LabView ◦ C# ◦ SQL ◦ Kotlin
