Certifications

ComptIA Security+ | CompTIA

June 2025 – June 2028

Experience

Software Engineer

Herndon, VA

Obscurity Labs

Apr 2026 – present

- Developed modern RESTful API services with Python and FastAPI, leveraging asynchronous endpoints, Pydantic validation, and automated Swagger/OpenAPI documentation.
- Contributed to a microservices-based application stack composed of independently deployable services.
- Leveraged Temporal to orchestrate long-running asynchronous tasks, ensuring reliable execution, automatic retries, and durable state persistence.
- Utilized NATS as a message broker to ensure message persistence and fault-tolerant delivery across services.
- Implemented and tested attribute-based access control (ABAC) policies using OPA v2 with Rego to enforce fine-grained authorization across microservices.
- Integrated OPA-based authorization into microservices, using signed JWTs and enriched user attributes to support Zero Trust access control policies.
- Contributed to Kubernetes-hosted infrastructure following GitOps practices and the App-of-Apps construct using Helm and Argo CD.

Security Engineer

Chantilly, VA

Obscurity Labs

May 2025 – Mar 2026

- Assisted customer applications in integrating SAML or OIDC for secure authentication and authorization.
- Configured Oracle Webgate reverse proxies to protect web applications and enforce access policies.
- Collaborated with development teams to improve application security by reducing unauthorized access and ensuring compliance with modern Zero Trust principles.
- Demonstrated authorization flow to interested parties through curl commands and browser network traces.
- Troubleshoot non-functional user flows, identified root causes, implemented necessary remediations, and recommended updates to resolve issues.

Software Engineer

Ashburn, VA

Obscurity Labs

Nov 2023 – May 2025

- Successfully led a high-risk production data migration for a critical system table, preventing data loss and downtime with no customer impact, in anticipation of NVD CVSS v4.
- Implemented regression and end-to-end tests to ensure code changes did not modify legacy delivery format.
- Actively participated in the software development, testing, and peer review process utilizing Scaled Agile Frameworks.

Projects

HomeLab Services

present

- Media Server: Professionally digitized and organized DVD library, enabling secure local hosting and seamless streaming.
- Private Cloud: Secure self-hosted storage with an integrated office suite and enhanced collaboration tools.
- Authentication Provider: Self-hosted OpenID Connect service with third-party identity provider integration.
- DNS Sinkhole: Network-wide ad blocking and protection against malicious domains and attacks.

Computer Desktop Screen Recording Application

Apr 2023

- Engineered screen capture and recording features, including region capture, screen recording, and buffered history, with integrated desktop and microphone audio support, delivering seamless recording and export to user-friendly MP4 files via an intuitive UI.

Infrared Universal Remote Mobile Application

Apr 2022

- Built an IR recording and control system using Arduino for signal capture and Android for signal transmission.

Education

University of Pittsburgh

May 2023

BS in Computer Information Systems and Technology

- Focus in Software Application Development
